TRAINING

Adobe Photoshop Advanced

Course Aims

This advanced one-day Adobe Photoshop course is designed for participants with an intermediate understanding of Photoshop who want to enhance their skills and delve deeper into the advanced features and capabilities of the software. Through guided demonstrations and hands-on practice, participants will master advanced selection techniques, advanced retouching and restoration, advanced layer management and adjustment layers, intricate text and typography effects, advanced filter effects and Smart Objects, neural filters and AI prompts, 3D design and rendering, advanced photo compositing, advanced Camera Raw editing, advanced automation and actions, and Creative Cloud integration for collaborative projects. By the end of this one-day advanced course, participants will have elevated their proficiency in Adobe Photoshop, gaining the skills required for intricate photo editing, advanced design projects, and efficient workflow management in professional creative environments.

Duration

6 hours (Face to Face or Virtual)

Target Audience

This advanced one-day course is designed for participants with an intermediate understanding of Adobe Photoshop. It is aimed at anyone who wishes to enhance their skills and delve deeper into the advanced features and capabilities of Adobe Photoshop.

Learning Outcomes

By the end of the course, participants will be able to:

- Master advanced selection tools for intricate, complex compositions
- Apply advanced retouching and restoration techniques to professional standards
- Use advanced layer features and adjustment layers for complex designs
- Create intricate text effects and stylised typography
- Apply advanced filter effects and use Smart Objects for non-destructive editing
- Use neural filters and AI prompts to accelerate creative work
- Create and render 3D objects and text in Photoshop
- Composite multiple images seamlessly into cohesive scenes
- Apply advanced Camera Raw adjustments for professional results
- Create and use advanced Photoshop actions to streamline workflows
- Harness Creative Cloud features for collaborative project delivery

Course Content

Session 1 - Advanced Selection Techniques

- Mastery of advanced selection tools for intricate edits.
- Refining and combining selections for complex compositions.

Session 2 - Advanced Retouching and Restoration

- Advanced retouching techniques for professional image enhancement.
- Restoration methods for revitalising aged or damaged photographs.

Session 3 - Advanced Layer Management

- Utilising advanced layer features for complex designs.
- Introduction to adjustment layers and their applications.

Session 4 - Advanced Text and Typography

- Creating intricate text effects and stylised typography.
- Utilising advanced text formatting and styling options.

Session 5 - Advanced Filter Effects and Smart Objects

- Applying sophisticated filter effects for creative enhancements.
- Leveraging Smart Objects for non-destructive editing.
- Working with neural filters and AI prompts.

Session 6 - 3D Design and Rendering

- Introduction to 3D design tools in Photoshop.
- Creating and rendering 3D objects and text.

Session 7 - Advanced Photo Compositing

- Techniques for seamless photo compositing.
- Integrating multiple images into a cohesive composition.

Session 8 - Advanced Camera Raw Editing

- Exploring advanced editing options in Adobe Camera Raw.
- Implementing Camera Raw adjustments for professional results.

Session 9 - Advanced Automation and Actions

- Creating and utilising advanced Photoshop actions.
- Streamlining workflows through automation.

Session 10 - Creative Cloud Integration and Collaboration

- Harnessing Creative Cloud features for collaborative projects.
- Sharing and collaborating on projects with team members.
